PROFESSIONAL SUMMARY

Data Analyst with close to 4 years of experience across the end-to-end data lifecycle and customer support. Skilled in Python, SQL, machine learning frameworks to deliver insights and support decision-making. Experienced in exploratory data analysis, automating data pipelines, and building insightful dashboards. Actively expanding expertise in advanced analytics and data science techniques.

KEY SKILLS

- **Machine Learning:** Classification, Regression, CNNs (Deep Learning), Clustering, Statistics.
- **Libraries & Frameworks:** Python (Pandas, NumPy, Scikit-Learn), SQL, PyTorch, Plotly, TensorFlow, Seaborn, DAX.
- **Data Visualization & BI:** Power BI, Tableau, VS Code, Google Colab, Jupyter.
- **Database Tools:** MySQL, Oracle.

EXPERIENCE

Data Analyst | Tata Consultancy Services (TCS)
March 2022 – September 2025

- Built and published dashboards in Power BI per end user requirements to track performance metrics and highlight trends.
- Automated data pipelines, reducing manual processing time by 12% and improving reporting speed.
- Analyzed incident data (network failures, SAP errors, device outages) to identify recurring issues and recommend preventive measures.
- Studied escalation patterns to improve ticket routing efficiency, reducing resolution time and enhancing user satisfaction.
- Documented workflows and escalation matrices, creating structured reference data for Knowledge Base Articles (KBAs) for future references.
- Developed Python scripts for automated data ingestion and cleaning, reducing preprocessing latency by 15%.
- Designed interactive dashboards to monitor tech teams individually, reducing manual oversight by 9%.
- Built a web scraping tool to extract organizational details for lead generation, cutting manual effort by 30%

ACADEMIC PROJECTS

- **Uber Demand-Supply Optimization**
  Technologies: Python, SQL, Power BI
  - Conducted trend analysis on ride-sharing data to identify high-demand zones and peak-hour supply gaps.
  - Proposed data-driven solutions to balance supply-demand mismatch, reducing idle driver time and optimizing ride availability during peak hours and thus minimizing the customer waiting time.
- **Credit Card Fraud Detection**
  Technologies: Python, ML
  - Built a supervised machine learning model to classify fraudulent vs. legitimate transactions.
  - Addressed multiple fraud scenarios including card cloning, counterfeit creation, unauthorized usage, and telemarketing scams by training on diverse behavioral patterns.
  - Validated model robustness using **Precision-Recall metrics and Confusion Matrix analysis** to minimize false positives
- **Distracted Driver Detection**
  Technologies: Python, Google Colab
  - Designed a classification algorithm using **Convolutional Neural Network** with **87% accuracy** for real-time image classification.
  - Implemented an automated alert system triggered by detected distractions (e.g., texting or eating) using live camera snapshots.
  - Enhanced road safety by integrating sensor feedback into a proactive driver intervention system.

EDUCATION

- **PGDM in Data Science** | IIIT-Bangalore | 2022 | CGPA: 3.5 / 5
- **B.Tech in Computer Science** | SRKR Engineering College | 2021 | CGPA: 7.9 / 10
- **Diploma in Computer Science** | Nuzvid Polytechnic | 2018 | CGPA: 8.8 / 10

ONLINE CERTIFICATIONS

- Artificial Intelligence and Deep Learning | Bennet University
- Google Data Analytics Professional Certificate | Coursera

CO-CURRICULARS

- Participated in AI and Android Development workshops to enhance technical skills.
- Facilitated 5 mentoring sessions for 35+ students, focusing on data fundamentals and AI applications.
